**From CCI Press : Nunavut Atlas (Circumpolar Research Series)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Nunavut Atlas (Circumpolar Research Series):

The Nunavut Atlas resulted from a project that assisted the Inuit in selecting the lands they would retain with the settlement of the Nunavut claim. Each section contains an indexed map of the settlement area, maps illustrating and text describing land use and critical wildlife areas. The Atlas is an invaluable resource for land use planning, and for anyone wishing to better understand the age-old relationship between Inuit and the natural environment.

About the Author Rick Riewe's research interests include human interactions with climate change in the Hudson Bay Region; impacts of northern development upon circumpolar peoples; wildlife ecology; boreal ecology; northern wildlife management; northern native harvesting and utilization of wildlife; northern land claims; environmental impact assessment; and the ecology of prairie grasslands; wildlife products utilized by Circumpolar Aboriginal peoples; the roles of aboriginal women in the domestic economy; and the ethnology of Circumpolar Peoples. He received a Ph.D. in Zoology from Memorial University of Newfoundland, and the University of Manitoba.
